DayNightSwitch

So I came across this awesome, kinda skeuomorphic-ish custom switch design on Dribbble and thought it was cute, so here you go:

Installation

CocoaPods

1. Add `pod 'DayNightSwitch'` to your `Podfile`
2. Run `pod install`

Manual

1. Clone or download the repo, drop the `DayNightSwitch.swift` file in your project and
2. Either drop a `UIView` into your storyboard and set its class to `DayNightButton` or create an instance of the switch like so:

Usage

```
let dayNightSwitch = DayNightSwitch(center: self.view.center)
dayNightSwitch.changeAction = { on in
    print("The switch is now " + (on ? "on" : "off"))
}
self.view.addSubview(dayNightSwitch)
```

License

Original credit for the design goes to [Ramakrishna](#) and for the animations to [Tsuriei MIT](#).
